PIGEON CONTROL

WHY Menace?

Clean...Green...Effective...Long Lasting

send 'BITCO' to 52424

Pigeons, one of the most resourceful species on the planet, are traditionally, symbols of love, peace, family and faithfulness. Their inflated throaty coos are a common sound in virtually every part of the globe with the exception of the Sahara Desert and the Polar ice caps. It is ironic that the species is currently being referred to as “the most serious bird pest associated with human habitations”.

Flock together

Pigeons have lived alongside humans and been used for food, sport and as messengers. Considered one of the most intelligent species on the planet, pigeons can perform tasks previously thought to be the sole preserve of humans and primates.

Descended from wild rock doves that thrive in a cliff environment, feral pigeons form large flocks that roost on building and ledges and under bridges. They can often be found in loft spaces and empty buildings — anywhere that offers a small amount of shelter.

A Naturalist says, ***“Feral pigeons (also known as FLYING RATS) thrive in urban areas in particular because there is usually a good food source and the absence of predators. The result is that they can become ‘pests’ in built-up areas. Unless food is strictly controlled, pigeons will rapidly breed out of control, resulting in overpopulation in areas of human habitation. Researchers have proved that pigeons do not usually like any change in their nesting area. Even a decoy or an image of a raptor when placed in the nesting or roosting area of pigeons discourages them from nesting. Whatever you do, ensure that it is humane and eco-friendly.”***

WHY Menace?

Problems From Pigeons

Damage - pigeon droppings are not only unsightly but are acidic and can cause damage to buildings and machinery. Nesting material, droppings and feathers can block gutters and air vents.

Public health - pigeons carry a range of diseases, some of which may be transmitted to humans if droppings contaminate food stuffs. For this reason their presence cannot be tolerated in and around food premises. They also carry mites which can cause skin disease and dust from their feathers can cause respiratory problems.

Accidents - pigeon dropping and food left down for pigeons can cause walkways to become slippery and dangerous. Startled flocks can take flight suddenly, causing hazards to motorists and pedestrians.

Other birds - large numbers of pigeons can drive smaller birds away from feeding areas. The pigeons also spread disease to other birds, reducing their numbers.

WHY Menace?

Areas Of Concern

Warehouse

- Pigeons carry over 60 transmissible diseases, causing safety concerns & liabilities.
- Damaging & compromising the quality of products stored on the premises.
- Leaving corrosive droppings that create slip-and-fall liability & compromise workplace safety
- Leaving corrosive droppings that create slip-and-fall liability & compromise workplace safety.

Industries

- Getting tangled in machinery
- Pecking holes in roofing
- Causing fire and suffocation risk by building nests in vents & chimneys
- Leaving corrosive droppings that cause irreversible damage to property, equipment & products
- Creating unsanitary messes that create slip-and-fall liability & compromise workplace safety & in turn spending huge amounts on housekeeping.

Hospitality

- Fouling entrances & other sensitive areas.
- Wide outdoor areas
- Landscapes.
- Protect signs, windowsills, & other high-profile surfaces.
- Facades & Balconies.

WHY Menace?

Areas Of Concern

Airports

- Signage.
- Building Structures.
- Hangars
- Creating unsanitary messes that create slip-and-fall liability & compromise workplace safety & in turn spending huge amounts on housekeeping.

Buildings & Hospitals

- Building Structures.
- Balconies
- Drive Ways
- Creating unsanitary messes that create slip-and-fall liability & compromise workplace safety & in turn spending huge amounts on housekeeping.

Open Areas

- Roosting in open areas.
- Creating unsanitary messes that create slip-and-fall liability & compromise workplace safety & in turn spending huge amounts on housekeeping.

Bird Netting

Bird netting is the strongest and most versatile bird exclusion system in the world!!!!

Bird net denies pest birds access to literally any architectural configuration including Courtyards, Rooftops, Industrial Shades, Buildings, Airports, Hospitals, etc.

Bird net is extremely durable and creates a true bird barrier against problem pigeons "homing" to their natural instinct to stay near their birth site. Pigeon netting completely controls pigeon problems, forcing the problem pigeons to look elsewhere for a nesting site.

Bird net is a nearly invisible bird control product that comes in Black & Milky White colors *(We don't recommend using Milky White Color netting unless its out of direct sun light as the netting will degrade much quicker than the black netting)* to blend with your structure. The bird netting consists of very thin, ultra-strong strands of polyethylene.

How It Works:

Bird netting consists of high density polyethylene twine that is twisted and knotted to form a strong impenetrable bird barrier to pest birds. The coloring (Black & Milky White) and U.V. treatment are embedded in the composition, making the bird net more resistant to the effects of the sun with a more consistent coloring throughout.

Bird net creates a physical barrier. It prevents pest birds from entering areas where they need to be excluded.

- 100% effective everywhere they are installed
- Discreet – barely visible from a distance, silent & require no power supply.

Advantages of Bird Netting

Clean...Green...Effective...Long Lasting

- ✓ Long lasting, humane, nearly invisible bird control product.
- ✓ 100% bird exclusion against all pest bird species.
- ✓ Extremely strong and versatile bird exclusion product.
- ✓ Wide variety of fastening devices for use on any substrate
- ✓ Specially treated polyethylene is highly resistant to U.V. rays.
- ✓ Will last for over 3 years
- ✓ Available in Black & Milky White* colors to blend with structure.
- ✓ Flame Resistant
- ✓ Will not rot or absorb water
- ✓ Special net zippers are available for easy maintenance access
- ✓ Humane bird control product

Bird Spikes

Bird Spikes are an excellent low profile bird deterrent system for use on ledges, parapets, signs, beams, chimneys, cutouts, security cameras, lights, etc. We offer bird spikes which are a humane bird spike with blunt tips that prevents injuries to both birds and unsuspecting maintenance workers.

Our bird spike bird control product consists of thin, U.V. polycarbonated rods and a clear U.V. resistant polycarbonate base for long-lasting durability while protecting against target pest birds. The diameter and spacing of the spikes make this bird spike the least conspicuous bird spike on the market and avoids entrapping debris as well.

How It Works:

Ease of Installation: Easy.

The bird spike base can be glued using exterior quality silicone adhesive or screwed through the moulded holes in the base. The 9" lengths are scored for easy break, accommodating any architectural configuration.

Pest birds such as pigeons like a flat surface to land on and bird spikes like our Bird Spikes prevent them from landing to gain a foothold. The bird spikes flexible base allows it to conform to both flat or arched areas, making it a very effective bird control product for use in areas with differing bird pressure, such as a protected ledge underneath a sunny overhanging parapet.

Clean...Green...Effective...Long Lasting

Advantages of Bird Spikes

- ✓ Long lasting, humane, nearly invisible bird control product.
- ✓ Easily glued or screwed to any substrate
- ✓ Extremely strong and versatile bird exclusion product
- ✓ Specially treated polycarbonate is highly resistant to U.V. rays.
- ✓ Spike rods are spaced to avoid entrapping debris
- ✓ Spike base is flexible allowing installation on curved surfaces too
- ✓ Will last for 5 years or more
- ✓ Humane bird control product
