

Model : 4

Model : 4 is a new and innovative designed pest control device for multi-directional sound wave emission. It is the first Pest Repeller with the vertical and horizontal speakers. They will create overall protection for the indoor environment. Pests get nowhere to hide. Sound waves broadcast by Model : 4 will rebound back and forth to fill out of the whole room intensively.

It creates a living environment uncomfortable to pests. Mice, rats and most of the household pests won't stay at the protection space but flee. The new comers are off limited from the area. There are operation modes of Mode Off, A, B, C for selection.
